

Table of contents

Chapter I: INTRODUCTION

1	Scope of the document	1
2	Genetically modified food and feed crops.....	1
3	Food versus feed safety assessment	2
4	Food and feed safety regulations	2
5	Introduction to food and feed safety assessment	2
6	Safety assessment strategy.....	3
7	References	4

Chapter II: MOLECULAR CHARACTERISATION

1	Introduction	5
2	Information on the presentation of data	5
3	Description of the genetic material used for the transformation.....	5
4	Description of the transformation method	6
5	Description of the transgene loci.....	6
6	Transcript and protein characterisation.....	7
7	Inheritance and stability	7
8	Detection and identification	8

Chapter III: TOXICOLOGICAL ASSESSMENT

1	Introduction	9
2	Comparative analysis (molecular characterisation and compositional analysis)	10
2.1	Information on expressed DNA-sequences	10
2.2	Marker-DNA	10
2.3	Allergenicity	10
3	Toxicological assessment	10
3.1	Study of literature	10
3.2	Screening for structure-activity relationship	11
3.3	Exposure assessment	11
3.4	Toxicological tests.....	11
3.4.1	Requirements	11
3.4.2	Metabolic / toxicokinetic studies	11
3.4.3	Acute toxicity	12
3.4.4	Irritation tests	12
3.4.5	Sensitisation.....	12
3.4.6	Genotoxicity.....	13
3.4.7	Repeated dose toxicity - Oral route	13
3.5	Whole-food toxicology testing	14
4	Background documents and references	14

Chapter IV: ALLERGENICITY ASSESSMENT

1	Introduction	17
2	Assessment Strategy	17
3	Initial Assessment	18
3.1	Source of the Protein	18
3.2	Amino Acid Sequence Homology	18
3.3	Pepsin Resistance	19
4	Serum Screening	20
5	Additional tests	21
6	Recommendations	22
7	Conclusions	22
8	References	22

Chapter V: FEED NUTRITION EVALUATION

1	Introduction	24
2	Compositional analysis	24
2.1	Compositional data and methods.....	24
2.1.1	<i>Major and minor constituents</i>	24
2.1.2	<i>Analytical methods</i>	26
2.1.3	<i>Statistical and sampling aspects</i>	26
2.2	Nutritional aspects	27
2.2.1	<i>Identification of key nutrients</i>	27
2.2.2	<i>Intake</i>	27
2.2.3	<i>Digestion</i>	27
2.2.4	<i>Nutritive value</i>	29
2.3	Anti-nutrients and toxicants	29
2.3.1	<i>Examples</i>	29
2.3.2	<i>Potential effects of cultivation conditions and processes</i>	30
2.4	Secondary plant and bacterial metabolites	30
2.4.1	<i>Examples</i>	31
2.5	Derived products	31
3	Implications of genetically modified crops in animal diets	31
3.1	Effects on animal performance and animal health	31
3.2	Effects on the quality of end products	33
4	Feed safety assessment	34
4.1	Nutritional assessment of genetically modified feeds from a physiological point of view..	34
4.2	Proposal of test method	36
5	Conclusion	36
6	References	37

Chapter VI: FOOD NUTRITION EVALUATION

1	Introduction	42
2	Compositional analysis	42
2.1	Compositional data and methods.....	42
2.1.1	<i>Major and minor constituents</i>	42
2.1.2	<i>Analytical methods</i>	43

2.1.3	<i>Statistical and sampling aspects</i>	46
2.2	Nutritional aspects.....	46
2.2.1	<i>Identification of key nutrients</i>	46
2.2.2	<i>Intake</i>	47
2.3	Toxicants and anti-nutrients.....	47
2.3.1	<i>Examples</i>	47
2.3.2	<i>Potential effects of cultivation conditions and processes</i>	48
2.4	Secondary Plant Metabolites.....	48
2.4.1	<i>Examples</i>	49
2.5	Derived Products.....	49
3	Implications of genetically modified crops to human nutrition	49
4	Conclusion	49
	Annex: LIST OF EXPERTS	51
